Pacific Controls Cloud Services partners with VMware to launch cloud based Desktop as a Service (DaaS) in the GCC

Participation in VMware Horizon DaaS Powered validation will enable customers to securely access desktop using any device, from anywhere

September 28, 2015 - Dubai, United Arab

Emirates: Pacific Controls Cloud Services (PCCS), the leading provider of IT as a Service (ITaaS) and a full range of cloud solutions, today announced that it has achieved VMware™ Horizon DaaS® Powered status, which will help enable its customers to rapidly deploy desktops and applications as a fully managed cloud solution - accessible from any device, from anywhere, at an affordable price.

As a member of the VMware vCloud Air Network Program, PCCS will be able to offer cloud-hosted virtual desktops and applications. Leveraging Horizon DaaS Bundle of VMware, PCCS will deliver a full windows desktop and applications from its cloud for access by any device, from anywhere. The solution can be offered in multiple editions, based on customer requirements: VDI Edition or Remote Desktop Session Host (RDSH) Edition.

“PCCS has always focused on bringing unique and high value solutions and services to its customers to help them derive productivity, reduce costs and enhance their competitiveness,”

said Mr. Dilip Rahulan, Executive Chairman and CEO of Pacific Controls. “We are a pioneering provider of cloud solutions in the Middle East, with a cloud infrastructure that is second to none. Our partnership with VMware is yet another step in this direction,” he added.

With VMware Horizon DaaS Solution, PCCS will be able to offer customers unprecedented benefits in the way desktop services are deployed, managed and used. This service will help customers enjoy premium user experience, enhance efficiencies, reduce costs, attain scalability and agility – all under a predictable monthly cost model. As the industry’s only virtual desktop infrastructure (VDI) deployment model that supports multi-tenancy, VMware Horizon DaaS Platform makes it easy for service providers like PCCS to offer complete virtual desktops and applications to customers in a truly scalable cloud environment. As a Horizon DaaS provider, PCCS can now provide users a unified platform for its customers, with dedicated virtual desktops and completely secure separation across five levels: meta-data, storage, networking, directory services and compute.
